Why attend

A computerised maintenance management system is only as useful as its data and processes. This course covers selecting, implementing and optimising CMMS: requirements, asset hierarchy, master data, work order and planning processes, preventive maintenance setup, inventory integration, reporting and user adoption.

Many organisations use only a fraction of their CMMS capability. You will learn to set it up and use it to improve maintenance.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

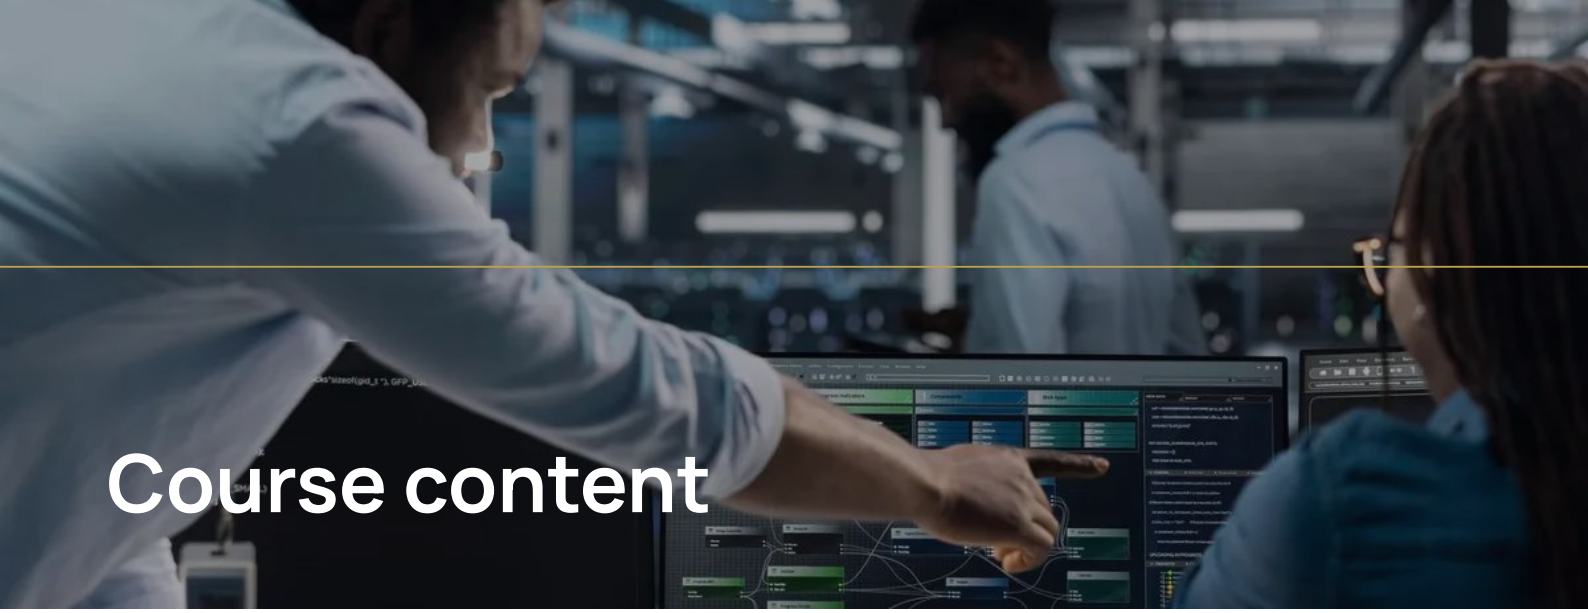

Asset hierarchy workshops, data quality exercises, system demonstrations and case studies.

Course objectives

By the end of this course, participants will be able to:
• Define CMMS requirements
• Build asset hierarchies and master data
• Configure work management processes
• Set up preventive maintenance plans
• Integrate spares and inventory
• Use CMMS reports and drive adoption

Target audience

This course is suitable for:
• Maintenance managers and planners
• CMMS administrators
• Reliability engineers
• IT staff supporting maintenance
• Maintenance supervisors

Course content

Target competencies

Participants will develop competencies in:

- Requirements definition
- Data structuring
- Process configuration
- Reporting
- Adoption
