Why attend

The number and location of warehouses and distribution routes shape cost and service for years. This course teaches distribution network design: analysing current networks, demand and cost data, service requirements, scenario modelling, total landed cost, trade-offs between inventory and transport, and implementing network changes.

Networks designed years ago rarely fit today's customers and costs. You will learn to evaluate and redesign distribution networks with data.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

Network modelling exercises, scenario analysis, case studies and implementation planning.

Course objectives

By the end of this course, participants will be able to:
• Analyse current distribution networks
• Define service and cost objectives
• Model network scenarios
• Evaluate total landed cost trade-offs
• Select warehouse locations and flows
• Plan network implementation

Target audience

This course is suitable for:
• Supply chain and logistics managers
• Network planners
• Operations directors
• Business analysts
• Consultants

Course content
