Why attend

Energy is a major operating cost in industrial plants and a key source of emissions. This course covers industrial energy management: energy audits, metering and monitoring, energy balances, efficiency opportunities in motors, steam, compressed air, heating and cooling, energy management systems, project evaluation and sustaining savings.

Most industrial plants can cut energy costs significantly with practical measures. You will learn to find, evaluate and deliver energy savings.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

Energy audit exercises, savings calculations, case studies and energy management system planning.

Course objectives

By the end of this course, participants will be able to:
• Conduct industrial energy audits
• Set up metering and energy monitoring
• Build energy balances and baselines
• Identify efficiency opportunities across utilities
• Evaluate energy projects financially
• Sustain savings through energy management systems

Target audience

This course is suitable for:
• Energy managers
• Plant and utility engineers
• Maintenance managers
• Sustainability managers
• Operations managers

Course content

Target competencies

Participants will develop competencies in:

- Energy auditing
- Data monitoring
- Opportunity identification
- Project evaluation
- Energy management systems

Course outline
