Why attend

Many projects combine fixed elements such as contracts, regulation and hardware with parts that benefit from agile iteration. This course shows project managers how to design hybrid delivery approaches that blend predictive planning with agile execution, tailor governance, integrate teams working in different ways and report progress consistently.

Pure waterfall or pure agile rarely fits complex projects. You will learn to choose and combine methods deliberately rather than by accident.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

Method-tailoring workshops, case studies of hybrid projects, planning exercises and governance design.

Course objectives

By the end of this course, participants will be able to:
• Compare predictive, agile and hybrid approaches
• Assess project characteristics to choose a method
• Design hybrid life cycles and plans
• Integrate agile teams with stage-gate governance
• Report progress across mixed methods
• Manage risks specific to hybrid delivery

Target audience

This course is suitable for:
• Project and programme managers
• PMO managers
• Delivery leads
• Product owners
• Engineering and IT managers

Course content

Target competencies

Participants will develop competencies in:

- Method tailoring
- Integrated planning
- Governance design
- Progress reporting
- Risk management
