Why attend

Infrared thermography detects abnormal temperatures in electrical, mechanical and building systems before they fail. This course covers thermography principles, camera operation, emissivity and reflected temperature, inspection of electrical panels, motors, bearings, steam systems and buildings, safety and reporting.

Thermography is a fast, non-contact way to find hidden problems. This course gives practical skills to plan and perform thermographic inspections.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

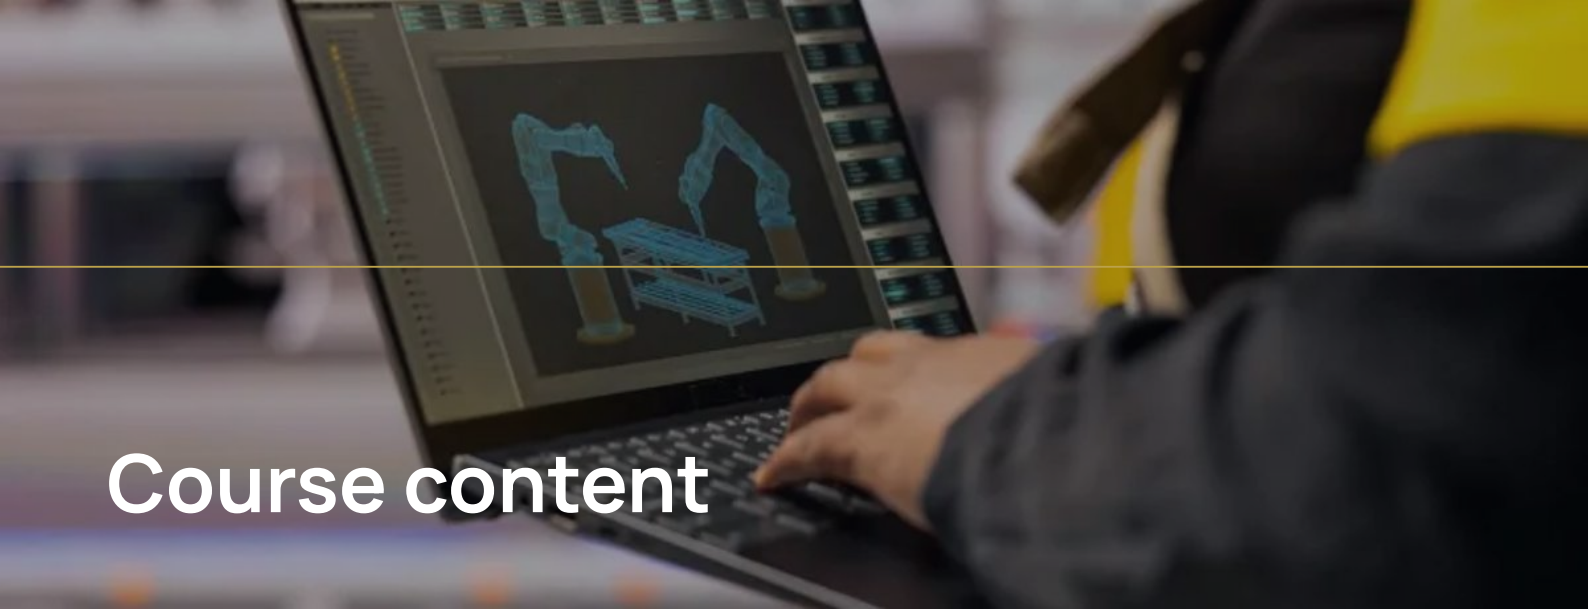

The course uses camera demonstrations, image interpretation exercises, case studies and report writing. It does not replace formal thermographer certification.

Course objectives

By the end of this course, participants will be able to:
• Explain infrared thermography principles
• Operate thermal cameras correctly
• Account for emissivity and reflected temperature
• Inspect electrical and mechanical equipment
• Interpret thermal images and assess severity
• Report findings and integrate into maintenance

Target audience

This course is suitable for:
• Maintenance technicians and engineers
• Electrical engineers
• Reliability engineers
• Facilities managers
• Condition monitoring specialists

Course content

Target competencies

Participants will develop competencies in:

- Thermography principles
- Camera operation
- Image interpretation
- Electrical inspection
- Severity assessment
- Inspection reporting
