Why attend

Overall Equipment Effectiveness shows how much productive capacity is lost through downtime, slow running and defects. This course covers OEE calculation, data collection, loss categories, analysing the six big losses, improvement methods such as SMED and autonomous maintenance, visual OEE boards and sustaining gains.

Most plants have hidden capacity locked in losses. You will learn to measure OEE correctly and unlock that capacity.

Professional Problems This Course Is Designed to Solve

- Difficulty translating subject knowledge into practical workplace decisions.
- Inconsistent approaches to the activities covered in the course outline.
- Lack of a structured plan for applying and reviewing new skills.

Course methodology

OEE calculations with real data, loss analysis workshops, SMED simulation and case studies.

Course objectives

By the end of this course, participants will be able to:

- Calculate OEE and its components
- Collect accurate OEE data
- Analyse the six big losses
- Apply improvement methods to major losses
- Display OEE visually for teams
- Sustain OEE improvements

Target audience

This course is suitable for:

- Production and operations managers
- Maintenance managers
- Process engineers
- Continuous improvement staff
- Shift supervisors
