Why attend

Risk-based inspection focuses inspection effort on the equipment with the highest risk of failure and consequence. This course covers RBI principles, damage mechanisms, probability and consequence of failure, risk matrices, inspection planning, data requirements, software tools and integrating RBI with mechanical integrity programmes.

Inspecting everything at fixed intervals wastes resources and may miss real risks. You will learn to plan inspection based on risk.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

RBI assessment exercises, damage mechanism workshops, case studies and planning tasks.

Course objectives

By the end of this course, participants will be able to:
• Explain risk-based inspection principles
• Identify damage mechanisms
• Assess probability of failure
• Assess consequence of failure
• Develop risk-based inspection plans
• Integrate RBI into integrity management

Target audience

This course is suitable for:
• Inspection and integrity engineers
• Corrosion engineers
• Maintenance engineers
• Plant engineers
• Inspection supervisors

Course content

Target competencies

Participants will develop competencies in:

- Damage mechanism assessment
- Risk analysis
- Inspection planning
- Data management
- Integrity management
